1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The added step of providing contacts is not clear since it appears in claim 7.

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claim 5 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. There is no description of the substrate having carbon or germanium, especially one having a dielectric thereon.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 3-4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Bartholomew (EP0116702). Bartholomew discloses the claimed invention at pages 6-7, with a poly silicon film having carbon, meeting the claims, being SiC. The dielectric substrate is silicon dioxide, with

the wafers EE1-EE10, at page 6, sample 1, the substrate. In claim 4, a boron dopant is disclosed at page 8, Example 1. In claim 6, the cap at page 8 meets the claim

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 7-8, and 10-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bartholomew (EP0116702) in view of Beinglass et al., or Amemiya et al. The claimed invention is as noted above, except the metal contacts. The references disclose contacts of metal 35b, 35a, or 13, for the purpose of contacting the resistor in order to employ same in a circuit, such that it would have been obvious to employ contacts for the same reason.

9. Applicant's arguments with respect to claims 3-13 have been considered but are moot in view of the new ground(s) of rejection.

10. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bartholomew (EP0116702) in view of Beinglass et al., further in view of Shimamoto et al. The claimed invention is as noted above, except the amorphous nature. Shimamoto discloses rendering a polysilicon resistor amorphous by implanting heavy doses of dopant, at col. 9, line 55-65, col. 14, lines 53-60, in order to optimize the temperature dependence of the resistor. It would have been obvious to render the film amorphous in order to optimize the temperature dependence where each reference is concerned with stable polysilicon resistors.

11. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
